## Notes:

- The above listed water disposal injection wells fall into DOGGR's defined injection well category of: "Water disposal wells injecting into any non-exempt aquifers, including aquifers whose exemption is not subject to debate, as well as those that are subject to debate (i.e., aquifers listed in the 1985 USEPA letter)."
- All above listed injection wells are located in the Central Valley Regional Water Control Board area (Region 5)

## The above listed 11 injection wells meet one or more of the following criteria:

- 1. The top of the injection zone is within 500 vertical feet of a water supply well with a known total depth (associated water supply well shaded red).
- 2. The injection zone is shallower than 1,500 feet below ground surface (ft bgs), and nearby water supply well is of unknown depth (associated water supply well shaded yellow)
- 3. The injection zone is shallower than 1,500 ft bgs and the vertical distance between the injection zone and the total depth of the water supply well is greater than 500 vertical feet (associated water supply well shaded green)

Each water supply well listed is within one-mile of one or more injection wells.

A water supply well may be listed twice (associated with more than one injection well).

- \*\* Screen interval of water supply well may be in the same zone as injection where depth of water supply well to top of injection zone is shown as a negative number
- •There are 108 unique water supply wells associated with the above listed 11 non-exempt injection wells. Some water wells are associated with more than one injection well.
- •Well depth information for water supply wells in many cases is based on information obtained from a well completion report.
- In some cases, the well completion repor may not be the well's actual report and the depth information may not be correct.
- •Identified water supply wells within the one-mile radius was based on a query of available information within the GeoTracker GAMA information system. In some ares, there may be many more water wells.

This is possible because no complete database exists for water supply wells, including domestic wells.
