THE AMERICAN NATURALIST

A MONTHLY JOURNAL
DEVOTED TO THE NATURAL SCIENCES
IN THEIR WIDEST SENSE.

MANAGING EDITORS:
PROF. E. D. COPE, Philadelphia, Pa., and DR. F. C. KENYON, Washington, D. C.

ASSOCIATE EDITORS:
PROF. H. C. WARREN, Princeton, ERWIN F. SMITH, Washington, D. C.

Vol. XXXI. MARCH, 1897. No. 363

CONTENTS.

Fossils and Fossilization. (Continued.)
L. P. Gratacap, 101

Bird Life in Central America.
Daniel F. Randolph 109

Upon an Undescribed Species of Megascolides from the United States.
Frank Smith, 202

Birds of New Guinea. (Continued.)
Geo. S. Mund, 204

Editor's Table—Science in the Newspapers.

Recent Literature—Experimental Morphology—Oceanic Ichthyology—Fishes of North and Middle America—Evolution or Creation.

Recent Books and Pamphlets.

General Notes.

Geology and Paleontology—Rocks of the Antarctic Continent—Queries on Rock Differentiation.

Botany.—Long Stolons of Phragmites—Barney and Head's Keys to Moses.

Vegetable Physiology.—What is Lycochoncoc mesenteroidea?—A New Disease of Tobacco Caused by Phytophthora nicotianae.

Illustrated.)—Zoological News.

Embryology—Spinning Powers of Certain Eggs.

Psychology.—The Action of the Venom of the Australian Black Snake.

Mrs. Helen Gardner on the Inheritance of Subserviency.

Anthropology—Mr. Wilson's investigation of the Swastika Cross. (Illustrated.)—Exploration of Captain Theobald Maler in Yucatan—Cave hunting in Syria.

Proceedings of Scientific Societies.

Scientific News.

PHILADELPHIA, U. S. A.

THE EDWARDS & DOKER CO.,
618 AND 520 MINOR STREET.

Entered at the Philadelphia Post Office as second-class matter.
of *Peneaus* is not formed on the animal that bears it, but in the dilated end of the ductus ejaculatorius as a secretion, and that probably it is carried over to the female during copulation. It has no cellular structure whatever, and is found in a rolled-up condition in the ducts of the males.

It was described by Spence in the Japanese variety of *P. canaliculatus*, and is to be found, though not so conspicuously, in *P. semisulcatus*, *P. curvirostris*, *P. monocerus*? and *P. sp.*—(The Japanese *mayebi*). Dr. Kishinouye's observations were made chiefly upon *P. canaliculatus* and *P. monoceros*?—F. C. K.

**Nerve-endings in the rennet glands of the Vertebrate Stomach.**—The nerves spreading out over the serous membrane of the vertebrate stomach arise from the plexus of Meisner and form two other plexi—one under the rennet glands, the other below the epithelium of the stomach. The simple nerve fibers form a plexus about the membrana propria of the glands and now and then pierce it, spreading their fine branches out around the cells. Each branch ends in a varicosity, but does not penetrate the cell as supposed by Nawalichin and some others. In this conclusion Dr. Kytmanow, the author of the paper cited, is in agreement with Erich Mueller, Smirnow, Arestein and others who have studied the peripheral or epithelial terminations of nerve fibers. His study upon the stomach of the cat was undertaken to determine surely what Erich Mueller had left as uncertain, namely, whether the fibers terminate inter- or intra-cellularly. For this he employed the Golgi, methylene blue and gold chloride methods. With the first he was unsuccessful, but with the other two, especially with the methylene blue, he arrived at the conclusion that has been given.—F. C. Kenyon.

**The Breeding Haunts of Ross' Gull.**—One of the valuable ornithological facts that the "Hero of the White North," Nansen, has to relate, is that he has discovered the breeding station of the circumpolar gull, *Rhodostethia rosea* Macy. The small group of islands which he calls the Hirtenland group, where he found the birds in large numbers and breeding, lie in 81° 33' N. Lat. and 63° E. Long. They seem to occupy a position within an area laid down by Payer as Wilczek land.

**Proper name for the Western Horned Owl of North America.**—In the "*Auk*" for April, 1896, p. 153 I published a revi-

---

sion of North American Horned Owls in which I showed that the name subarcticus Hoy. was a synonym of arcticus Swains, and hence untenable for the light colored Bubo of the western states.

In the same paper I proposed to recognize the small Bubo of southern California as a distinct subspecies under the name pacificus Cassin.

For the old "subarcticus" I proposed the name occidentalis and selected for my type a specimen from Mitchell Co., Iowa (No. 26435, Coll. Acad. Nat. Sciences, Phila.) which showed the greatest contrast to the small Californian race.

This specimen, however, unfortunately proves to be intermediate between B. virginianus and arcticus and does not belong to the race which I had intended to rename; the latter not extending so far east (See Auk., Jan., 1897, p. 132.)

Such being, the case my name "occidentalis" must be relegated to synonymy and I would propose for the Horned Owl of the interior United States (the "subarcticus" of authors, nec. Hoy) the name pallescens, designating as the type, No. 152219, Coll. U. S. Nat. Mus. & Watson Ranch, 18 mi. S. W. of San Antonio, Texas.

Bubo virginianus pallescens is smaller and paler than the true virginianus (the wing measuring 13.75 in.) with much less rufous admixture. The barring on the belly is much finer and the feet almost pure white.

While not differing so much in size from B. v. pacificus as indicated in my former paper (Auk., 1896, p. 156), its coloration is quite distinct. The latter race is darker than pallescens with more black admixture above, heavier bars on the belly and with the feet more mottled with rufous and brown.

In entering Bubo virginianus pacificus Cass. in the Supplement to their Check List the American Ornithologists' Union Committee have added to the confusion by giving it the same number as has already been given to B. v. saturatus.

The various races of our Horned Owls should now stand as follows in the A. O. U. List:

375. Bubo virginianus (Gmelin). Great Horned Owl.
375b. Bubo virginianus arcticus (Swainson). Arctic Horned Owl.

An Incomplete List of the Mammals of Bertie Co., N. C.—
During the years 1891, 1892 and 1893 we received a number of small
