

基産地だと云ふ Calayan 島のものより size の小さいものさへあったから、此蜂須賀氏の新名を採用する事は尙多くの基産地の標本を見る迄は當分躊躇せざるを得ない。

次に鹿野氏は採集鳥類以外に尙獲られなかつた鳥の名を 4 種だけ舉げて居られるが、此中のカツアドリの學名 *Sula sula* (L.) とあるのは明かに誤りであつて *Sula leucogaster plotus* (FORSTER) とせなければならぬ。又コウトウコノハヅクの蕃名 "Totogo" は少々疑はしく、此名は同島に產するタイワンアヲバヅク *Ninox (Ctenoglaux) scutulata totogo* MOMIYAMA<sup>1)</sup> を指すものであつて、コウトウコノハヅクの方は "Totou" と同島では謂ふさうである（これは同年同地に派遣した採集者鈴木善七君の調査に據る）。それ故タイワンアヲバヅクの亞種名には蕃名を共體採用した譯だ。

此亞種も未だ記載を試みた事がないから次に出して置く。

#### タイワンアヲバヅク *Ninox scutulata totogo* MOMIYAMA.

成鳥——内地に夏季普通に見られるアヲバヅク *Ninox scutulata scutulata* RAFFLES<sup>2)</sup> に比べると、胸から腹の方に掛けては却つて白味勝ちであつて内地産のものゝ様に淡い「バフ」色を帶ぶる程度が妙い。そして栗褐色の軸斑は鮮明である。初列風切の第 2 羽は第 5 羽と同長か又はそれより短い（内地産では概して第 2 羽の方が第 5 羽より少し長い）。

×      ×      ×

紅頭鳩の鳥類に關して目下 1-2 調査中のものもあるし、又全部の採集品に就て纏めつゝあるから遠からぬ中に専門誌に發表するつもりで居る。それ故爰には簡単に説明して置く。

(於接續 4, IX, 1930)

1) *Ctenoglaux scutulata totogo* MOMIYAMA, Amoeba, ii, no. 1, p. 26 (1930—Botel Tobago), nom. nud.

2) *Strix scutulata* RAFFLES, Trans. Linn. Soc. London, xiii, pt. 2, p. 280 (1822—Sumatra). [Synonym—*Strix hirsuta japonica* TEMMINCK et SCHLEGEL, Fauna Japonica, Aves, p. 29, pl. 9 (1850—Japan. Restricted type locality : N. Kiusiu)].

## **Translation of the descriptive text of *Ninox scutulata totogo* (MOMIYAMA) 1931, Amoeba [Tokyo], 3, page 68.**

[Three lines of un-translated text]

Next, Mr. Shikano [or Mr. Kano] mentions the name of four species of birds which he did not collect. Among these, the scientific name of the brown booby *Sula sula* (L.) is an obvious mistake, and should be *Sula leucogaster plotus* (FORSTER). Also, the name of the scops owl "Totogo" is rather doubtful, and this name should refer to Taiwanese hawk-owl *Ninox (Ctenoglaux) scutulata totogo* MOMIYAMA<sup>1</sup>), which breeds in the same island (of Taiwan) (according to Mr. Zenshichi Suzuki, a collector whom I sent to Taiwan in the same year). Therefore, this name was used as the subspecies name of the Taiwanese brown hawk-owl. I have not yet given any description of this subspecies too, so I will put it in the next section.

Taiwan Aobazuku (Taiwanese brown hawk-owl) *Ninox scutulata totogo* MOMIYAMA.

Adult - Underparts (from breast to belly) more whitish and has lesser amount of pale "buff" colored shade compared to *Ninox scutulata scutulata* RAFFLES<sup>2</sup>), which is a common summer visitor in mainland Japan. Maroon brown streak in underparts rather vivid. The second primary feather is either as long as or shorter than the fifth (in mainland specimens, the second tend to be a little longer than the fifth).

Currently, I am surveying a couple of Taiwanese birds, and also I am compiling the information about my entire collection and will be publishing it soon, so I just give only a simple explanation here. (at Sasazuka [in Tokyo] 4, IX, 1930)
