Please Oppose David Bernhardt For Deputy Secretary of the Interior

Dear Senator:

We are writing to express our strong opposition to the recent nomination of David Bernhardt for deputy secretary of the Interior. After spending years lobbying for the oil and gas industry, big agribusiness and water profiteers, Mr. Bernhardt is laden with conflicts of interest that raise serious questions about his ability to act in the public interest. Further, during his tenure as solicitor of the Department of the Interior, the agency's chief ethics officer, political appointees engaged in ethical lapses and decisions that sacrificed science and the environment to line corporate pockets. The deputy secretary of the Interior Department plays a key role in directing the management of our parks, monuments, forests, refuges, water and wildlife, including endangered species, and Mr. Bernhardt's confirmation would imperil these public resources. We therefore urge you to oppose his appointment.

Mr. Bernhardt's conflicts of interest are profound. His lobbying firm, Brownstein, Hyatt, Farber, and Schreck, has a significant financial stake in the Cadiz project, which seeks to pump water from an aquifer beneath California's fragile desert and sell it to Southern California urban water agencies. Scientists fear that the proposed pumping would significantly damage Mojave National Preserve and Mojave Trails National Monument by drying up springs and other waters that are critical for bighorn sheep, bobcats, and other wildlife. The Cadiz project will require permits from the Department of the Interior to move forward, and, if confirmed as deputy secretary, Mr. Bernhardt would be in a position to approve this ill-advised project that could make millions for his firm.

Mr. Bernhardt and his firm have also received \$1.27 million since 2011 to represent Westlands Water District in California — the largest water district in the United States and a key player in big agribusiness. In his work for Westlands, Mr. Bernhardt lobbied Congress to undermine Endangered Species Act protections that are critical for safeguarding salmon and other native fish in the San Francisco Bay-Delta. He also helped Westlands negotiate a settlement with the Department of the Interior regarding toxic agricultural drainage that would provide Westlands with a windfall worth over \$350 million. The settlement agreement is currently stalled pending action by Congress, and Mr. Bernhardt's confirmation would allow him to help push the ill-conceived deal across the finish line to benefit his former client.

Mr. Bernhardt has represented mining and extraction companies, developers, and oil and gas interests. He lobbied for a bill seeking to delay new air pollution limits on coal-fired power plants while working for EP Energy, an American subsidiary of Access Industries. He pushed multiple bills that would have expanded offshore oil and gas drilling in the aftermath of the BP Deepwater Horizon disaster on behalf of Cobalt International Energy, a company that was investigated by the Securities and Exchange Commission and the Department of Justice for violations under the Foreign Corrupt Practices Act. He also represented the National Ocean Industries Association, which represents the offshore oil and gas industry, as an intervenor defendant in litigation that was brought against the Bureau of Ocean Energy Management and oil and gas interests in response to the issuance of new offshore leases immediately following and near the Deepwater Horizon spill. Mr. Bernhardt also lobbied for Rosemont Copper, now Hudbay Minerals, which is seeking permits to mine copper and dispose of its toxic-waste rock and tailings in the Coronado National Forest in Arizona. His extensive ties to companies that seek to exploit public resources for profit should disqualify him for this key resource-protection role.

Further, Mr. Bernhardt's record at the Department of the Interior displays a troubling pattern of placing profits for industry above science-based environmental protection. Mr. Bernhardt was one of the Bush administration's point people in the push to promote oil drilling from the Arctic to Wyoming. As solicitor he authored several controversial legal opinions, including one that stated the Department could not use the Endangered Species Act to address the threats of climate change to polar bears even if the species was protected under the Act. Another opinion, subsequently thrown out in court, interpreted the definition of "endangered species" in a manner that made listing more difficult, but made it easier to remove protections for endangered species. Mr. Bernhardt's time at Interior was also associated with a series of investigations conducted by DOI's Inspector General, including one report that concluded that staff within the Department were interfering with the scientific integrity of the Endangered Species Act.

Mr. Bernhardt has indicated that he plans to recuse himself from matters involving former clients for one year, **and that he may not recuse himself if he receives authorization to work on such matters.** This is insufficient and unacceptable. He should not seek, accept or be granted any exemptions from issues that he may have a conflict. The Senate, at a minimum, must make this clear.

The Department of the Interior is charged with protecting our public lands, waterways and wildlife for future generations. David Bernhardt's conflicts of interest, industry ties and questionable judgment make him ill suited to lead the Department, and his confirmation would place our most cherished natural resources at risk.

Sincerely,
